PROJECT TIMELINE/OVERVIEW

November December 2007	January 2008	February March 2008	April May 2008
<ol style="list-style-type: none"> 1. Research and review relevant documents, establish criteria for benchmark selection, summarize preliminary findings. 2. 1st WA Panel Meeting. 3. Develop methodology and instruments to support expert review. 	<ol style="list-style-type: none"> 4. Submit preliminary report to SBE. 5. Facilitate expert review of Washington Science Standards. 	<ol style="list-style-type: none"> 5. Analyze/interpret results of expert review & prepare recommendations. 6. 2nd WA Panel Meeting. 7. Submit interim report to SBE. 	<ol style="list-style-type: none"> 8. Facilitate public input into the Science Standards Review. 9. 3rd WA Panel Meeting. 10. Submit final report to SBE. 11. 4th WA Panel Meeting. <p>Note. A final WA Panel Meeting will be held following the OSPI revisions to the Standards.</p>

TOP TEN STRENGTHS

(1) Recognizes "all students."
(2) Initiated more in-depth look at curriculum and teaching.
(3) Helps users to understand science learning progression over time.
(4) Relative "mass" of EALR number 1 versus EALR numbers 2 and 3 is appropriate.
(4) K-10 focus results in science actually being taught in lower grades.
(4) Initiated cross-grade level discussions about science.
(5) There are only 3 EALRs and 42 GLEs (limited number is appropriate).
(6) Standards act as a catalyst for district-wide professional development and curriculum development.
(7) EALR #2 (process of science) is included and given importance.
(8) Standards have given rise to clarity on core science concepts.
(8) Lack of curricula/instructional specification is good.
(9) There is an even distribution of physical, earth, and life sciences in EALR #1.
(10) The level of content and grade-level distribution is based on NSES/research.
(10) Document provides examples for practitioners.

TOP TEN WEAKNESSES

- (1) Lack of strong connection between standards and assessment.
- (1) There is an implication that all content is covered in each grade.
- (2) Grades 9-10 are extra challenging with too much too cover.
- (3) Document lacks clarity on what component is the actual standard.
- (3) Document suffers from being just a "book of lists," lacking narrative explanations.
- (4) Not very usable document for teachers.
- (5) Use of Bloom's Taxonomy - the verbs used are at the lower level of the taxonomy.
- (5) GLEs don't describe detail necessary for implementation (curricula, instruction).
- (6) Forces "too much" to be covered and not enough time to do it all.
- (7) Vocabulary is not consistent with common practice in field.
- (8) GLEs don't reflect personal student attributes, as referenced in the Preliminary Science College Readiness Definitions.
- (9) No clear aim is stated in the document.
- (9) Details are often misinterpreted when implemented.
- (10) Document says it will be the basis for WASL but doesn't hold true.

SELECTION OF BENCHMARK STATES/NATIONS

Benchmark States:

California
Colorado
Massachusetts

Benchmark Nations:

Finland
Singapore

Criteria Used in Selection:

- New Economy Indicators
- Comparison studies of state standards reviews (Education Week, Fordham Institute, AFT)
- National & International Assessments (NAEP, TIMSS & PISA)

PREVIEW OF LIKELY AREAS FOR RECOMMENDED CHANGES

- Connections between the standards, curriculum, and assessment.
- Content of the standards in terms of grade-level appropriateness and emphasis.
- Amount of content and balance between standards that address understanding of scientific concepts, scientific skills related to inquiry, and the application of scientific concepts.
- Structure and usability of the document.
- Strategies for implementation of the standards.
